

OPTIMIZE EVERY PROCEDURE AND EVERY SURGICAL OUTCOME

At every stage of cataract surgery, you are working to ensure your patient's safety and deliver the highest quality postop outcomes possible.

Exclusive **FUSION PHACO** Technology on the **WHITESTAR Signature** System provides:

- Integration of FUSION Pump Fluidics
 Management and ELLIPS FX Handpiece
- Choices and options to tailor the system to your preferred technique
- Increased efficiency during surgery

A HISTORY OF AMO INNOVATION IN PHACOEMULSIFICATION

The first closed phaco fluidic system

First occlusion mode for phaco

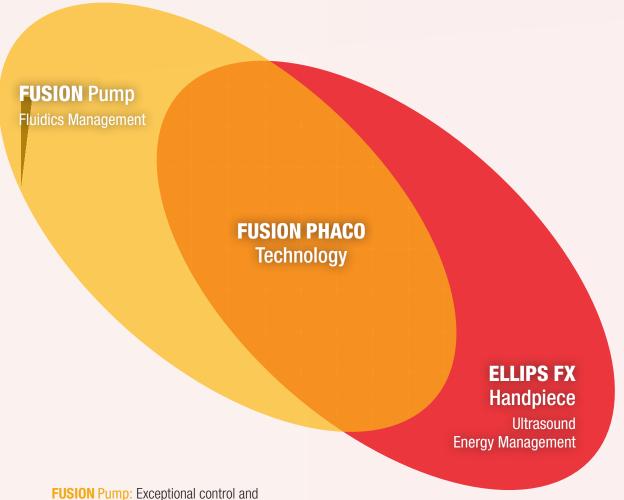

First micropulse phaco technology

WHITESTAR Technology with cold phaco

Variable **WHITESTAR** Technology: intraoperative micropulse control

1993 1994 1995 2001 2002 2003 2004 2005

Experience the unprecedented technology, efficiency, and choices that only the truly innovative, **WHITESTAR Signature** System with **FUSION PHACO** Technology delivers.

FUSION Pump: Exceptional control and efficiency by combining the holdability of the peristaltic pump and the followability of the venturi pump in a convenient, single cassette.

ELLIPS FX Handpiece: Transversal and longitudinal phaco for smooth cutting and excellent efficiency.

WHITESTAR ICE Technology— Chamber stabilization WHITESTAR Signature System With FUSION Fluidics Handpiece Control Footpedal

FUSION PUMP: FLUIDICS MANAGEMENT

FUSION Pump Fluidics Management enables you to choose the most effective pump for your technique, peristaltic or venturi, based upon the stage of the procedure. The exclusive design of the **FUSION** Pump uniquely integrates the pumps in a single cassette, allowing you to switch between pumps at any time during the procedure. Each pump is designed with unique benefits that, when combined with your personal technique, result in excellent control and efficiency throughout the entire cataract procedure.

AT EACH STAGE OF SURGERY, YOU CAN CHOOSE THE IDEAL PUMP FOR YOUR TECHNIQUE.

Peristaltic Pump – provides excellent "holdability"

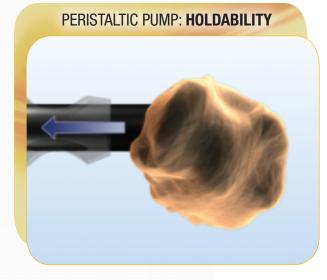

Venturi Pump – provides excellent "followability"

MAKING THE SWITCH IS EASIER THAN EVER

With the wireless Advanced Control Footpedal, you can switch between peristaltic and venturi pumps at any time during the case by pivoting the footpedal to the left or right.

PERISTALTIC PUMP STRENGTHS

- Provides excellent "holdability" with low-flow, high-vacuum fluidics
- Easily holds large lens fragments at the tip, a safe distance from the posterior capsule
- · Adjust vacuum, fluid flow, and rise time independently
- Promotes excellent chamber stability through automatic occlusion sensing

VENTURI PUMP STRENGTHS

- Provides superior "followability" with high-flow, low-vacuum fluidics
- Effectively draws small lens fragments and wispy cortex to the tip, reducing the need to chase strands
- Increased efficiency and responsiveness resulting from the linking of vacuum and aspiration modes
- Decreases lens chatter and may reduce effective phaco time

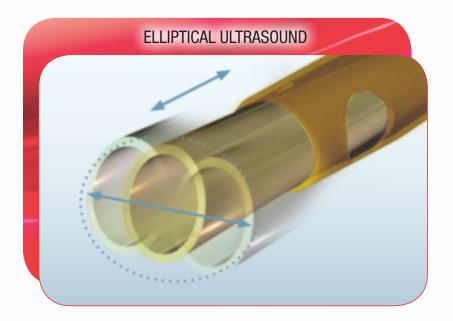

The combination of peristaltic and venturi fluidics in the **FUSION** Pump creates two separate working zones: (1) peristaltic's low-flow, high-vacuum zone, which I use for chopping; and (2) venturi's high-flow, low-vacuum zone, which I find is ideal for segment removal. Having access to both pumps during a case lets me more precisely control every stage of the procedure and helps me give my patients their best possible outcome.

ELLIPS FX HANDPIECE: ULTRASOUND ENERGY MANAGEMENT

The **ELLIPS FX** Handpiece gives you the next level of lens extraction. The **ELLIPS FX** Handpiece generates a continuous three-dimensional tip movement. The path of the tip traces an ellipsoid and delivers smooth, efficient cutting with hard and soft lenses.

ELLIPS FX HANDPIECE ADVANTAGES

- Simultaneous blending of both transversal and longitudinal tip movement ensures smooth cutting and excellent efficiency
- Flexibility and versatility to work with curved or straight tip styles allows the system to match your preferred technique on any type of cataract

I have been impressed by the cutting efficiency of the **ELLIPS FX** Handpiece. I have closely monitored the performance of the system, and I find that the efficiency of the **ELLIPS FX** Handpiece lowers phaco times, power settings, and requires less BSS. These factors have meaningful benefits for the safety of my patients in terms of less endothelial cell loss, less macular swelling, and less change in corneal thickness.

THE **FUSION PHACO** TECHNOLOGY ADVANTAGE

On its own, the smooth cutting of the **ELLIPS FX** Handpiece offers significant benefits to surgeons during cataract surgery. When combined with the advantages of the **FUSION** Pump, however, the **WHITESTAR Signature** System offers performance unlike anything I've experienced before. The **ELLIPS FX** Handpiece combines with the peristaltic pump to effectively hold large fragments at the end of the tip. With venturi on the other hand, the **ELLIPS FX** Handpiece provides phenomenal efficiency, without compromising chamber stability, due to efficient cutting even at low levels of vacuum.

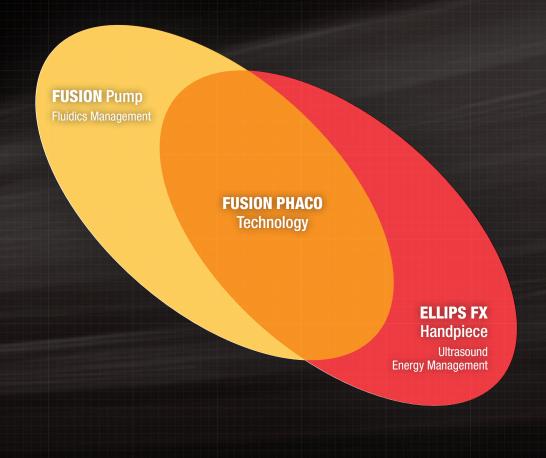

The choices available through the system's advanced energy and fluidics management technologies give surgeons like me the best of both worlds, letting me customize each procedure to my own preferences.
